

IntelliSep[®]

SEPSIS TEST

TRANSFORMING SEPSIS CARE

**Real-World Results from
IntelliSep at OLOL**

Our Lady of the Lake Regional Medical Center

FACILITY FACTS

- Flagship hospital of Franciscan Missionaries of Our Lady Health System
- Largest inpatient facility in Louisiana (800 beds)
- Level 1 Trauma Center and major academic teaching hospital for LSU

EMERGENCY DEPARTMENT OVERVIEW

- Regional ED Volume: 96,000 ED visits annually
- ESI Avg: 2.8
- 3 Freestanding EDs
- Market ED Volume: 158,000 visits

With a longstanding commitment to sepsis care, Our Lady of the Lake Regional Medical Center enhanced early recognition and treatment by developing a protocol using Epic’s Our Practice Advisory (OPA) alerts. This protocol incorporates both triage and provider tools to streamline screening, standardize diagnostic order sets, and guide timely ED decisions.

TIMELINE OF SEPSIS QUALITY IMPROVEMENT INITIATIVE WITH INTELLISEP

IntelliSep is the first and only FDA-cleared diagnostic test to aid in early sepsis detection in the ED. In ~8 minutes, it assesses biophysical properties of white blood cells and delivers clinically actionable insights about sepsis risk, presented as a numerical value with three interpretation bands.

See the IntelliSep Test Instructions for Use for all cleared claims and performance data.

Two ways for ordering IntelliSep

Primary (Triage) OPA:
triggered by triage vitals and nursing questionnaire

Secondary (Provider) OPA:
triggered later by the Epic Sepsis Model if clinical criteria are met

** Clinicians were educated on these pathways during the first month of implementation.*
** As of July 2024, clinicians could order the test at their discretion, independent of the EPIC alert.*

EMERGENCY DEPARTMENT WORKFLOW USING INTELLISEP

The above Decision Making notes regarding IntelliSep were generated by the Emergency Department of Our Lady Of the Lake Regional Medical Center and were based on their institutional practices and site validation of IntelliSep. See the IntelliSep Test Instructions for Use for all cleared claims and performance data.

IntelliSep Impact at Our Lady of the Lake Regional Medical Center

1-Year Real-World Outcomes

CLINICAL IMPACT

30-Day Sepsis Associated Mortality Rate¹

$p < 0.001$

30-Day In-Hospital Mortality Rate Band 1 Patients²

$p < 0.05$

OPERATIONAL AND FINANCIAL IMPACT

Hospital LOS for Sepsis Patients¹

$p < 0.048$

0.76 day
Reduction in LOS

\$2,235
Estimated savings per sepsis patient^{3,4}

Blood Culture Use Rate¹

Improved risk stratification enables smarter testing and staffing efficiency

40%
Reduction in unnecessary blood cultures for low-risk **Band 1** patients

8%
Increase in blood cultures in high-risk **Band 3**

OPERATIONAL AND FINANCIAL IMPACT

ED Discharge Rate²

3-Day ED Return Rate²
p < 0.032

QUALITY MEASURE IMPACT

SEP-1 Compliance²

↑ 30%
Absolute increase in SEP-1 compliance

"Our results show that a higher percentage of patients are returning home to their families earlier, at lower cost for them and the hospital. Our ability to improve patient flow has been revolutionary."

Christopher Thomas, MD

Chief Quality Officer
Franciscan Missionaries of Our Lady Health System

"These findings spotlight how IntelliSep enables clinicians to detect sepsis earlier in patients for whom the condition wasn't otherwise suspected. Conversely, IntelliSep also provides an objective tool for clinicians to rule out sepsis and move onto an alternative diagnosis."

Hollis O'Neal, MD, MSc

Critical Care Physician, Medical Director of Research
Our Lady of the Lake Regional Medical Center

"This is a game-changer for us. Until this point there hasn't been a clear diagnostic tool to determine if a patient had or could develop sepsis. With clear and early detection, we are able to get patients the appropriate treatment, at the right time."

Mark Laperouse, MD

Medical Director of Emergency Services
Our Lady of the Lake Regional Medical Center

***“IntelliSep helps us save
one life every week.”***
